Description of Product Differences SNS200/ EVO200/SNS200CMP/ SNS300/EVO300/SNS300CMP

The product differences between the EasySense family models SNS200 and SNS300 are limited to the available features in the application software only. The design, construction and radio performance of these two models is otherwise identical.

The between these two models refer to the functionality of different features used in various applications. Application firmware functionality has no effect on EMC emissions, or RF strength.

For these products, SNS can be substituted by EVO or CMP may be used as a suffix in the model number, as shown above. The only difference in these models is the type of bracket attached to the SNS sensor.

Sincerely

Richard Haring
Regulatory Specialist
Philips Lighting North America Corp.
